“Competence Modelling
for European HR and Policies:
Bridging Business,
Education, and Training”

09-10
November
2011
Brussels, Belgium

Visit: www.competencetools.eu

About the European project eCOTOOL:

The long-term objective of eCOTOOL is to develop a European skills and competence model that can be integrated into existing European policies (Europass, EQF, EQAVET, ECTS, and ECVET) and adapted to any purpose. The eCOTOOL consortium is developing the Europass CS eco-tools that offer a new approach not yet available anywhere in Europe or other LLP countries. The overall objective of eCOTOOL is to improve the development, exchange, and maintenance of VET certificates, and their accessibility and transparency, by harmonizing Europass with other European instruments and e-competences.

This will increase both European mobility and the transparency of VET systems, and will be achieved through:

- the development of an application profile (an abstract information model derived from European policies) and technical tools (XML bindings as data models) based on the Europass Certificate Supplement (CS)
- the adaptation of all Europass CS eco-tools to the agricultural sector and their pilot testing and optimization.

Overview of the European Conference COME-HR:

This European Conference “Competence Modelling for European HR and Policies: Bridging Business, Education, and Training” (COME-HR) is focused on new approaches to vocational training through competence models, e-learning and social communities.

The 2011 conference continues the discussion developed at the first four related European conferences held in Vilnius (Lithuania), Budapest (Hungary), Bucharest (Romania) and the planned European conference “Innovations in the Environmental Sector” (INES) which will take place in Brussels (Belgium) in September 2011.

The conference is organized together with an experience session on the 10th of November, giving all participants the opportunity to exchange their experiences face-to-face and to test the tool on hands-on sessions.
